

Manhole Restoration

Aged, structurally compromised manhole

Deteriorated mortar causes groundwater leakage

Structural spraying of cementitious coating

Epoxy-lined restored manhole

SEWERSAVERS
TRENCHLESS SOLUTIONS

Specialists in Structural Repair and Corrosive Protection

A leader in trenchless technologies, we have been safely and cost-effectively restoring concrete water and sewer systems since 1975. Our trenchless solutions and expertise:

- Target structural repair and corrosive protection to eliminate system shutdown.
- Specify replacement or restoration methods and materials that save time, money and alleviate the inconvenience and danger of a "big dig."
- Utilize a specialized high-strength, proprietary blend of mortars, resins and additives that protect the concrete from deterioration, improve structural integrity and provide better durability and longevity than replacement or less-proven restoration methods.
- Include cure in-place applications such as: cementitious lining; epoxy, urethane and polyurea spray linings; lateral lining; and, chemical grout injection.

Our team is...

- Highly skilled, experienced professionals
- Well-trained on products and installation methods
- Trained to OSHA standards and certified for confined spaces
